

Engie

Atoti for Commodity Trading Risk Analysis

Situation

- Engie, a mid-size global energy provider, needed a solution that could provide fast, accurate and up-to-date information on their risk and PnL for trading desks, risk control and top management.
- Engie's portfolio is comprised of 5 million energy market trades across Europe and Asia in oil, natural gas and carbon certificates with maturity dates from one day to five years.
- As a Regulated Investment Service Provider, Engie operates like an investment bank and must meet global banking requirements.

Benefits

Atoti allowed Engie to gain much more precise insight into their risk and PnL and to optimize their energy supplies.

-  Instantly pinpoint outliers and discrepancies and react, with trade-level insight into risk and PnL variations
-  Provide C-suite clients with detailed, interactive and up-to-date reports to better drive the business
-  Accurately and efficiently allocate fuel from the best currently available deals to meet demand 20 times faster than before

End Result

Over several projects, Atoti offers Engie a precise control of its market risk, freeing up assets to generate more revenue and to significantly optimize its operations by identifying the best fuel deals to meet the energy demand at any time.

Every fifteen minutes Engie has commodity volumes that need to be delivered. This is a highly critical process that runs 24/7. Atoti is providing the service we want, with flexibility around the multiple dimensions we have.

Matthieu Tisserand, **Head of Risk and PnL IT for Engie**
